

NOTES

The files provided are for the right glove. To print the left, flip all the parts except Dial.stl and print again.

Dial.stl can just be printed twice and will fit in either glove but shouldn't be flipped due to the fact the needle limit needs to stay on the right.

The explosion diagram and the finger build order should help with the build. Fabric parts are shown in the render for display purposes only but should be completed separately. Recesses have been provided for when you want to do this.
